

UPGRADE FOR NEW & EXISTING LIQUID RING COMPRESSORS

GARO® Fluid Indicator & Purge Demister Kit

Extend bearing life and compressor reliability with the right levels of clean, uncontaminated lubricant. Equipped with Liquid Level Gauges, this kit allows for constant monitoring of compressor oil levels and cleanliness.

Developed for both single and double-stage liquid ring compressors, the kit includes four main components.

1. Closed System Oilers

The closed system is prevention for contamination and spillage.

2. Liquid Level Gauges

Visually inspect oil level and check for contamination.

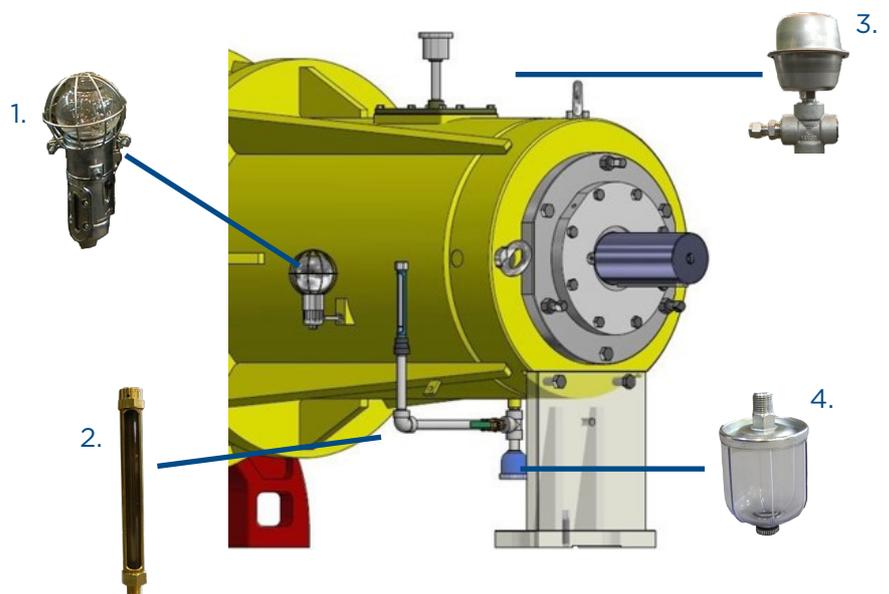

3. Oil Demister Filter

Ensures that the depressurization the oil chamber occurs.

4. Sump Bottles

Used as collection chambers on bearing housings and other oil sump applications, sump bottles collect water and contaminants, and have a drain plug for easy inspection and removal of fluids.

- Visually Monitors Oil Levels
- Allows for Visual Inspection of Oil for Contamination
- Improves Venting of the Bearing Frame
- Increases Bearing Life and Reliability
- Reduces the Necessity of Inspections
